

---

If you're trying to figure out what the best TV tuner card is for your computer, don't worry, we've got you covered. In this article we'll take a look at three of the most popular models and examine what makes them so great. There's the AVerMedia Auxio U3 USB 3.0 TV Tuner Card, which is a USB 3 card that outputs in 1080p and has an FM radio built-in so you can listen to your favorite station while viewing your programming. Then there's the Gefen TUV300HD PCIe 1x Gen2 TV Tuning Card with HDMI Output, which has an HDMI 1.4 output to connect your computer up to your HDTV, plus it supports full 1080p output, which is nice. Finally, the PCProbe TV tuner card is probably the cheapest option available, but also capable of encoding digital video for broadcast, which makes it a pretty good overall card. The AVerMedia Auxio U3 USB 3.0 TV Tuner Card has all of the advantages of other similar cards, but adds one great feature not found on other models - that being an FM radio built into the card itself! This means that you can listen to your favorite radio station or news anchor while you watch TV without having to have another device connected to your computer. The Gefen TUV300HD PCIe 1x Gen2 TV Tuning Card is the only option that has an HDMI 1.4 connection, which can help you get a much better quality signal out to your computer monitor. If you have a decent sized HDTV, this card can give you some pretty decent picture quality, which is great for watching movies or playing games at 1080p. The PCProbe TV tuner card is the cheapest option available, but also capable of encoding digital video for broadcast, meaning it can actually be used to encode your shows for streaming over the internet. Unlike other similar cards, this one does not have an internal FM radio built-in. This is probably because it's much more expensive than other options available. The card is capable of outputting in both analog and digital formats, so you can use it either with a standard antenna or an HDTV antenna for better reception. The AVerMedia Auxio U3 USB 3.0 TV Tuner Card is a good option if you want a card that has a built in FM radio to listen to while watching television. It outputs in 1080p and supports all of the major broadcasting providers like ABC, CBS, NBC, PBS and Fox. The Gefen TUV300HD PCIe 1x Gen2 TV Tuning Card has 2 inputs and 2 outputs, which can be used with your HDTV antenna and your regular television. It supports 1080P output and HDMI 1.4 connection which means it can give you full HD quality when outputting the signal to your computer monitor or HDTV.
